In all the examples above, we have supposed, as is commonly the case, that V does not involve the limits of the integral. But it may happen, that V will involve the values of w9 y, p, c. at the limits. In that case we must recur to the investigation in (8); instead of giving V the value which it has there, we must put dw4 dyl + Mix + Nly + Pip + c. By going through the same operation as is there performed, we find lu + c., fA7. d(P) -P(Q)., Now, cS#y, 5yy, c, are not functions of #, generally, but of the limiting values of oo.; and, therefore, in the integration they may be considered constant with respect to a?9 and may be put before the integral sign as multipliers. The last line, therefore, is not to be connected with that immediately preceding, but with the former parts. Thus we have...
