Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1904 Excerpt: .and additional forms have been obtained from the Triassic of California, it becomes a much more difficult matter. To settle it satisfactorily involves a discussion of the primitive characters and the course of evolution of the Ichthyosauria. This is deferred to a study of the subject to appear in a later paper. DETAILED DESCRIPTION OF NEW GENERA AND SPECIES. Leptocheirus. New Genus. Caudal vertebrae elongated. Dorsal ribs single-headed. Coracoid shield-shaped, much elongated antero-posteriorly, without anterior or posterior emargination. Extremities with three slender digits and rudiment of a fourth. Anterior limb much larger than posterior. Elements of the propodial and epipodial segments of anterior and posterior limbs much longer than broad. Epipodial bones separated by a wide cleft. Bones of first and third rows of the mesopodial, metapodial, and phalangeal regions all notched on one or both sides. Carpus and tarsus with linear arrangement, three elements each...
